

## Highly efficient disinfectant for haemodialysis machines

The Puristeril® 340 is a disinfectant composed of peracetic acid which is indicated for cold disinfection of haemodialysis equipment.

### **Composition**

100g of Puristeril® 340 contains peracetic acid (at least 3.5g), hydrogen peroxide and acetic acid.

### **Properties**

Bactericidal  
Fungicidal  
Virucidal  
Destroys pyrogens  
Dissolves blood residues

### **Use**

Use in haemodialysis machines with the proportional mixing system.

Puristeril® is mixed with water in a 1:35 ratio, resulting in a 0.1% solution of peracetic acid.

This disinfectant is easily removable by rinsing with water, until the disinfectant residues have been eliminated.

### **Packaging**

10 litres
